

Adhesive uPVC Georgian/Colonial Bars

07/01/2024 10:25 pm EDT

These uPVC-Georgian bars consist of shock and weather resistant unplasticised PVC, partly with soft PVC-gasket lips. They possess a PE-foam adhesive tape with aging- and weathering resistant acrylic adhesive (tested application also in the automotive and glass industry). Decor surfaces (laminated / coloured profiles) are highly weather resistant. uPVC Georgian bars with decor lamination must be shortened by 20mm at the ends of the profile rods, since at these points the lamination bonding could be defective due to technical influences. Ventilation of coloured bars is realized via front side. For full details see here: [uPVC - Georgian Bars.pdf](#)
